Art Unit: 2621

*Election/Restriction*

1. Restriction to one of the following invention is required under 35 U.S.C. 121:

I. Claim 14-26, drawn to a method of an image data structure in which a feature of an image are expressed at different resolutions, classified in class 382, subclass 240.

II. Claims 1-13, drawn to a method of an image search in which color similarity between a reference image and target image, classified in class 382, subclass 165.

2. Invention are distinct, each from the other because of the following:

Invention I and II are related as combination and subcombination (Invention I being the combination, and invention II being the subcombination). Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability and (2) that the subcombination has utility by itself or other combination (MPEP § 80-6.05 (c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the details provide for in claims 1-13 are not recited in claims 14-26. The subcombination has separate utility such as searching an image in the database based on the color similarity between the target image and the reference image (image in the database).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purpose as indicated is proper.

Art Unit: 2621

3. Application is advised that the reply to this requirement to be complete must include an election of the invention to be examined even the requirement be traversed (37 CFR 1.143).
